

## Formulário De Consentimento

**Nome do Projeto:** Understanding Robots - Robotic Multi-User Legibility

**Investigadores:** Miguel Faria, Prof. Francisco S. Melo, Prof. Ana Paiva

This questionnaire intends to assess the expressiveness of a robot, through movement, in an interaction with multiple people.

In order to evaluate, you will observe videos of four different movements of a robot moving to grab a cup. Each cup has a different color, to make it easily distinguishable. After each video, you will have to predict which cup the robot is going to grab.

In this questionnaire we will not ask or record any information such as your name or address and to your answers we will attribute a number so as to anonymize your questionnaire. We will, however ask you some demographic questions such as age and the country you live in.

Before starting, in the name of the research team, I would like to thank you for the time spent answering to this questionnaire and help in our study.

Do you allow the use of your answers for academic purposes?

☐ Yes

☐ No
