Robotic Multi-user Legibility

This questionnaire intends to assess the expressiveness of a robot, through movement, in an interaction with multiple people.

In order to evaluate, you will observe videos of four different movements of a robot moving to grab a cup. Each cup has a different color, to make it easily distinguible. After each video, you will have to predict which cup the robot is going to grab.

In this questionnaire we will not ask or record any information such as your name or address and to your answers we will atribute a number so as to anonymize your questionnaire. We will, however ask you some demographic questions such as age and the country you live in.

Before starting, in the name of the research team, I would like to thank you for the time spent answering to this questionnaire and help in our study.

*Obrigatório

	Do you allow the use of your answers for academic purposes? * Marcar apenas uma oval.
,	
	No Passe para "Thank you for your collaboration!!."
This surve	mographic Information section serves to collect some background information regarding the participants that take this ey. This information is important for the research team to be able to frame the population that take this tionnaire and understand if the results are representative of the population in general.
	nformation collected in this section may also be used by the research team to draw patterns betwee ent backgrounds and interaction with robots.
2. \	What is your age? *
3. \	What country do you live in? *
	What is your work occupation? * Marcar apenas uma oval.

	Student-Worker
	Independant worker
	Employee
	Other

5.	What is your educational degree? * Marcar apenas uma oval.
	High School
	Bachelors
	Masters
	Doctorate
	Other

First Robot Movement

You will now watch the first set of three small videos. These show the same movement for a robot, moving to grab one of the cups in the image. After, you will see the complete movement to know which cup the robot grasped.

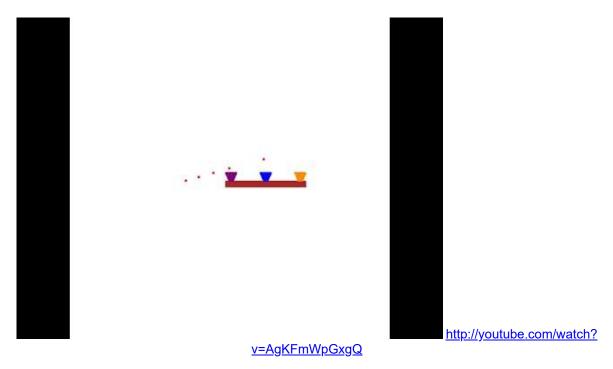

Each video will be of different lengths and at the end of each you will have to predict which of the cups the robot is going to grab.

The aim of this study is to evaluate how well a robot can communicate through movement, so feel free to change you prediction from video to video.

Remember that there are no right or wrong answers, we are evaluating your perception of the movement to develop the communication skills of a robot.

Second Robot Movement

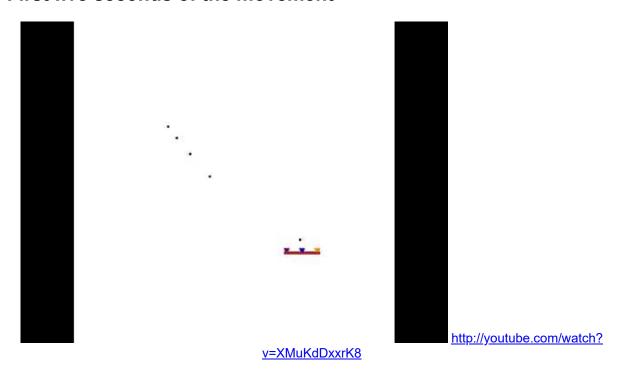

You will now watch the second movement to grab one of the cups. This is a different movement than before, so there are no guarantees that the target of the movement is the same as before.

Again, feel free to change you prediction from video to video, if you believe that with more of the movement seen you think the target is another.

Remember that there are no right or wrong answers, we are evaluating your perception of the movement to develop the communication skills of a robot.

Movement Comparison

Now that you watched the four different movements, we ask you to compare them by answering the following questions.

Remember there are no right or wrong answers.

42. Which movement made the robot's intention clearer? ** Marcar apenas uma oval.
Red movement
Black movement
Yellow/Gold movement
Green movement
43. Which movement do you prefer to interact with? * Marcar apenas uma oval.
Red movement
Black movement
Yellow/Gold movement
Green movement
44. Which movement was easier? * Marcar apenas uma oval.
Red movement
Black movement
Yellow/Gold movement
Green movement
